The murine anti-PLAP VK gene (AAQ11845) contains 3 CDRs which are use to reshape the human anti-PLAP VK gene. The murine anti-PLAP VK gene (AAQ11845) CDRs were used to reshape the human anti-PLAP gene VK (AAQ11847). The specific binder for human PLAP contains at least one of the former 3 CDRs and/or at least one of the latter CDRs. The produced antibodies are more readily tolerated when administered to a human patient. Antibody reagents can be used to identify, e.g. by serum testing or imaging, and/or to treat PLAP-producing cancers. Buch cancers can occur as, e.g. breast cancer, ovarian cancer and colon cancer or can manifest themselves as liquids such as pleural

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The murine anti-PLAP Vk gene contains 3 CDRs which are used to reshape the human anti-PLAP Vk gene (AAQ11848). The murine anti-PLAP Vk gene (AAQ11845) CDRs were used to reshape the human anti-PLAP gene Vk (AAQ11847). The specific binder for human PLAP contains at least one of the former 3 CDRs and/or at least one of the latter CDRs. The produced antibodies are more readily tolerated when administered to a human patient. Antibody reagents can be used to identify, e.g. by serum testing or imaging, and/or to treat PLAP-producing cancers. Such cancers can occur as, e.g. breast cancer, ovarian cancer and colon, cancer or can manifest themselves as liquids such as pleural

The present invention describes a method (M1) for producing a human antibody phage display library (I), comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used too screen nucleic acids encoding antibody chains obtained from the contract of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing a human antibody phage display library comprises providing a transgenic animal whose genome comprises human immunoglobulin genes and isolating nucleic acids encoding antibody chains from lymphatic cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display library using this method means there is no need to immunise humans with antigens, and the difficulties faced with immortalising B cells are avoided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        murine anti-human glycoprotein (gp) 39 monoclonal antibody (MAb) 39-1.106 (a member of the murine kappa V subfamily). The MAb was corporated by immunising a 6-8 week old BALBC mouse with a gp39-CD8 fusion protein, and 3 days later harvesting and fusing spleen and lymph cells to mouse melanoma cells, to produce an anti-human gp39 cm MAb producing hybridoma. The MAb may be useful for diagnosing disease states, inhibiting B-cell activation and for treating immunological disorders, e.g. autoimmune disorders, allergic responses, organ rejection and graft versus host disease. It may also be used for imaging cells which express gp39 on their surface, e.g. tumour cells, and to target therapeutic agents to such cells. The MAb inhibits the CD40/gp39 interaction, therefore limiting both prim and sec. responses to T-cell dependent antigens and Ab prodn. specific to these antigens. A typical compsn. for intramuscular injection pref. contains 50 mg of MAb in 1 ml of sterile buffered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the light chain variable region of the humanised murine anti-human glycoprotein (gp) 39 monoclonal antibody (Mab) 39-1.166. The Mah may be useful for diagnosing disease states, inhibiting B-cell activation and for treating immunological disorders, e.g. autoimmune disorders, allergic responses, organ rejection and graft versus host disease. It may also be used for imaging cells which express gp39 on their surface, e.g. tumour cells, and to target therapeutic agents to such cells. The Mab inhibits the CD40/gp39 interaction, therefore limiting both prim, and sec responses to 7-cell dependent antigens and Ab prodn. Specific to these antigens. A typical compsn. for intramuscular injection pref. contains 50 mg of Mab in 1 ml of sterile buffered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Monoclonal antibodies specific for different epitope(s) on human gp39 - used for inhibiting B cell activation and for the diagnosis of various disorders, e.g. cancer, psoriasis etc..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .

This is a murine anti-Tie2 kinase receptor agonist monoclonal antibody 1588 light chain variable region. Tie2 is a single-transmembrane, tyrosine kinase receptor ('Tie' stands for tyrosine kinase receptor with immunoglobulin and endothelial growth factor (EGF) homology domain(s)). Anti-Tie2 antibodies may be administered to enhance angiogenesis in mammals suffering from ischemic disease, myocardial infarction or cerebral stroke or other vascular diseases such as diabetes. It may also be used to enhance endothelial cell survival and to promote haematopoietic or megakaryocyte cell proliferation (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface and which
                                                                                                                                                                                                                                                                   Tie2 receptor agonist antibodies useful for promoting angiogenesis in patients suffering from strokes and myocardial infarctions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein fused with a monoclonal antibody against an antigen present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Monoclonal antibody; fusion protein; antigen; cell surface; receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY92161-63 are light chain CDR (complementarity determining regions) from a novel murine anti-Tie2 kinase receptor agonist monoclonal antibody 1588. Tie2 is a single-transmembrane, tyrosine kinase receptor ('Tie' stands for tyrosine kinase receptor with immunoglobulin and endothelial growth factor (EGF) homology domain(s)). Anti-Tie2 antibodies may be administered to enhance angiogenesis in mammals antibodies may be administered to enhance angiogenesis in mammals or offering from ischemic disease, myocardial infarction or cerebral stroke or other vascular diseases such as diabetes. It may also be used to enhance endothelial cell survival and to promote haematopoietic or megakaryocyte cell proliferation (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tie2 receptor agonist antibodies useful for promoting angiogenesis in patients suffering from strokes and myocardial infarctions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

A protein fused with a monoclonal antibody against an antigen present Claim 15; Page 9; 24pp; Japanese. on cell surfaces -

The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody and a bNA, and a method for the preparation of a monoclonal

which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by RCR; (2) the framework portion of the mouse type monoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody; (3) a gene encoding the amino acid tail is added to the single-stranded antibody gene of the human type single-stranded antibody gene of the immunoporter gene; and (4) the human type single-stranded immunoporter. Communoporter gene; and (4) the human type single-stranded immunoporter. Communoporter gene; and (4) the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein against a receptor present on cell surface. The present sequence represents a specifically claimed amino acid sequence from the present invention.

A protein fused with a monoclonal antibody against an antigen present on cell surfaces

Example; Fig 12; 24pp; Japanese.

The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein which is a complex of protein and a DNA, and a method for the preparation of a monoclonal antibody gainst a receptor present on cell surface is which; (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by PCR; (2) the framework portrion of the mouse type monoclonal antibody by PCR; (3) the framework portrion of the antibody gene of a human type monoclonal antibody to prepare a single-stranded antibody gene of the human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter

ö gene is expressed in a microbe to prepare a recombinant protein of the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein against a receptor present on cell surface. The present sequence represents a protein sequence which is given in an example from the present invention. The present interaction describes a process which is these which a monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human corporation and a monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein against a receptor present on cell surface in which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody portion of the mouse type monoclonal antibody by CK: (2) the framework portion of the mouse type monoclonal antibody by CK: (2) the framework portion of the complex to a minody gene of a human type monoclonal antibody; (3) a gene encoding the amino acid tail is added to the single-stranded antibody gene of the fuman type monoclonal antibody to prepare a human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene; and microbal antibody to prepare a human type single-stranded immunoporter gene; through a cell surface receptor. The method is used for the preparation of the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein a preparation of a monoclonal antibody-fused protein against a receptor present on cell curface. The present sequence represents a protein sequence which is surface. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A protein fused with a monoclonal antibody against an antigen present

monoclonal antibody against an antigon present on cell surface and which can transfer a gene by combining with the gene and containing a human crype single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal containing an integration which is a complex of monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein against a receptor present on cell surface in which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a monoclonal antibody is converted to prepare a single-stranded antibody gene of the minoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody is converted to prepare a single-stranded antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is converted to prepare a single-stranded antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the human type monoclonal antibody is antibody gene of the single-stranded monoclonal antibody is an of the human type monoclonal antibody is an into antibody gene of the single-stranded monoclonal antibody is converted to prepare a single-stranded monoclonal antibody is converted to prepare a single-stranded monoclonal antibody is converted to prepare a single-stranded monoclonal antibody gene of the human type monoclonal antibody gene of the human type monoclonal antibody gene of the human type monoclonal antibod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of a monoclonal antibody-fused protein against a receptor present on cell surface. The present sequence represents a protein sequence which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  human type monoclonal antibody to prepare a human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene is expressed in a microbe to prepare a recombinant protein of the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein fused with a monoclonal antibody against an antigen present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                        Monoclonal antibody; fusion protein; antigen; cell surface; receptor:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a protein which is fused with a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                       Sequence 68,

i GENERAL INFORMATION:
 GENERAL INFORMATION:
 APPLICANT: Medical & Biological Laboratories Co., Ltd.
 TITLE OF INVENTION: Monoclonal Antibody Specific for TITLE OF INVENTION: Monoclonal Antibody Specific for TITLE OF INVENTION: MONBER: US/09/257,069
 CURRENT APPLICATION NUMBER: US/09/257,069
 CURRENT FILING DATE: 1998-09-07
 PRIOR APPLICATION NUMBER: US/09/257,069
 PRIOR PILING DATE: 1998-09-07
 PRIOR FILING DATE: 1998-09-07
 NUMBER OF SEQ ID NOS: 10
 SOFTWARE: PatentIn Ver. 2.0
 SEQ ID NO 4
 LENGTH: 107
 TYPE: PRT
 ORGANISM: Mus musculus
